

Smart Thermometer for your Medication

Place it in the bag or the
refrigerator and get instant alerts

MedAngel is a wireless thermometer and app
for iPhone and Android that monitors the
temperature of your medication.

Medication Storage

Fridges seem pretty simple, they are closets that remain cold.
We are all instructed by the pharmacist to take our medications
directly to our refrigerator at home. But many people are surprised
to learn that the temperature in the fridge fluctuates, is wildly different
in different compartments and that **a fridge can also freeze.**

Store your insulin safe with
MedAngel
Temperature Sensor

Taking your meds to the beach on a hot day? Or exploring the mountains?
MedAngel will notify you if your meds are getting too hot or cold, whether
they're in a bag, cooler or the hotel fridge, letting you prevent accidents
before they happen.
